Questa ferrovia, inizialmente conosciuta come “Pacific Railroad”, è stata una linea ferroviaria continua di 1912 miglia costruita tra il 1863 e il 1869 che collegava l'esistente rete ferroviaria orientale americana a Omaha, Nebraska con la Pacific Coast. Le “Big Boys” scomparvero dai binari 60 anni fa, ma ora la Union Pacific vuole ripristinare la locomotiva 4014. Il suo uso è previsto per treni speciali. Questo sarà il giusto modo per celebrare la più grande locomotiva a vapore mai costruita e, allo stesso tempo, il 150° anniversario della cerimonia del “Last Spike”, l'ultimo chiodo conficcato della prima ferrovia transcontinentale a Promontory Summit, Utah, il 10 maggio del 1869.

Die über 3.000 km lange Strecke verband seit dem 11. Mai 1869 die Siedlungsgebiete am Missouri River mit Kalifornien. Nachdem die „Big Boys“ vor 60 Jahren ausgemustert worden waren, wird die Lokomotive 4014 von der Union Pacific derzeit wieder aufgearbeitet. Sie soll nun für Sonderfahrten wieder eingesetzt werden und somit gleichzeitig an die Zeit der größten jemals gebauten Dampflokomotiven sowie die Eröffnung der ersten transkontinentalen Eisenbahnverbindung 1869 am Promontory Summit erinnern.

Ce chemin de fer, à l'origine connu sous le nom de “Pacific Railroad”, était une ligne ferroviaire continue de 1.912 milles. Construit entre 1863 et 1869, il connectait le réseau oriental des États-Unis à Omaha, Nebraska, avec la côte pacifique. Aujourd'hui, après 60 ans d'inactivité, l'Union Pacific procède à la restauration de la locomotive 4014 en vue de son utilisation pour les trains spéciaux. La 4014 célébrera simultanément l'âge d'or des plus grandes locomotives à vapeur du monde et le 150e anniversaire de la cérémonie de la “Jonction des Rails” du premier chemin de fer transcontinental au Promontory Summit, dans l'Utah, le 10 mai 1869.

Este ferrocarril, conocido originalmente como “Ferrocarril del Pacífico”, fue una línea de ferrocarril continua de 1.912 millas. Construida entre 1863 y 1869, conectaba la red ferroviaria del este de los EE.UU. en Omaha, Nebraska con la costa del Pacífico. Hoy, tras 60 años de inactividad, la Union Pacific está llevando a cabo la restauración la locomotora 4014, con vistas a su uso para trenes especiales. La 4014 celebrará simultáneamente la época dorada de las locomotoras de vapor más grandes del mundo y el 150 aniversario de la ceremonia del “Clavo de Oro” del primer ferrocarril transcontinental en Promontory Summit, Utah, el 10 de mayo de 1869.

This railroad, known originally as the “Pacific Railroad”, has been a 1,912-mile continuous railroad line constructed between 1863 and 1869 that connected the existing eastern U.S. rail network at Omaha, Nebraska with the Pacific coast. After the “Big Boys” disappeared from the tracks 60 years ago, the Union Pacific is now restoring the locomotive 4014. It is planned to use the locomotive for special trains. This way at the same time it will celebrate the biggest steam locomotives ever built and the 150th anniversary of the ceremony for the driving of the “Last Spike” of the first transcontinental railroad at Promontory Summit, Utah, on May 10, 1869.

**HR2753****NEW**

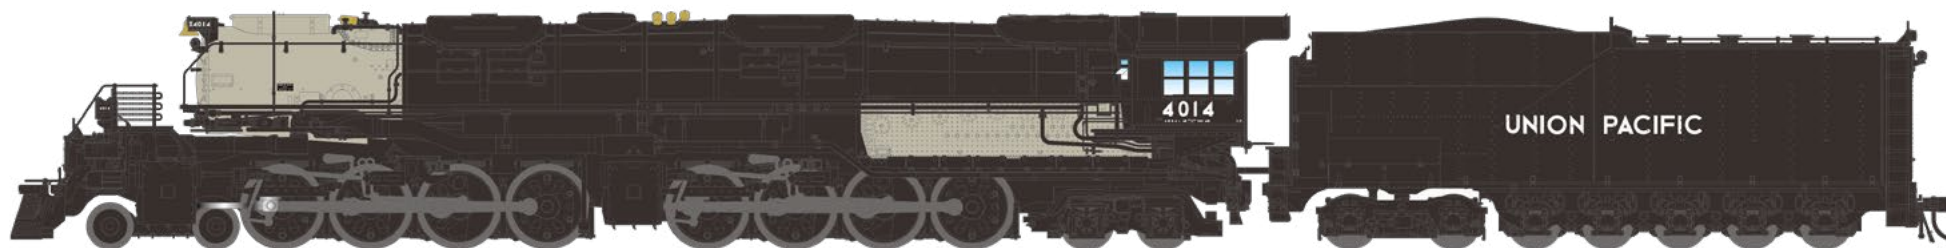

Union Pacific, locomotiva a vapore per merci pesanti, classe 4000 “Big Boy”, numero di servizio 4014. Edizione speciale per il 150° anniversario della First Transcontinental Railroad.

Union Pacific, Schwere Güterzugdampflokomotive der Reihe 4000 „Big Boy“, Betriebsnummer 4014. Sonderedition anlässlich des 150. Jahrestags der ersten transkontinentalen Eisenbahnverbindung zwischen Omaha und Sacramento.

Union Pacific, locomotive à vapeur, classe 4000 “Big Boy”, série 4014. Édition spéciale à l’occasion du 150e anniversaire du premier chemin de fer transcontinental.

Union Pacific, locomotora de vapor, clase 4000 “Big Boy”, matrícula 4014. Edición especial en celebración del 150 aniversario del primer ferrocarril transcontinental.

Union Pacific, heavy freight train steam locomotive, class 4000 “Big Boy”, running number 4014. Special edition in celebration of the 150th anniversary of the first transcontinental railroad.

Tra tutte le motrici articolate, la 4-8-8-4 era la “più grande” per dimensioni, peso, potenza e velocità. Da qui il nome “Big Boy”, che in modo appropriato riassume tutte queste qualità. Pare che il nome provenga da una scritta fatta con gesso sul portellone della camera del fumo del prototipo 4000 da un operaio dell'ALCO. La Big Boy poteva raggiungere una velocità di 80 miglia orarie (130 Km/ora) e la sua massima potenza, di oltre 7000 cavalli, si sviluppava alla velocità di 30 miglia orarie (48 Km/ora).

Die Lokomotiven der Reihe 4000 waren mit ihrer Achsfolge (2'D)D2' h4 die größten Dampflokomotiven der Union Pacific und zugleich einer der größten Dampflokomotiven der Welt. Der Name „Big Boy“ stammt von einer Kreideanschrift auf der Rauchkammer, welche von einem Arbeiter der ALCO-Werke während des Baus angebracht wurde. Konstruktive waren die Maschinen für eine Geschwindigkeit von 80 mph (ca. 130 km/h) ausgelegt und konnten eine Leistung von ca. 7000 PS (bei 30 mph – ca. 40 km/h) entwickeln.

De toutes les locomotives articulées, la 4-8-8-4 était la plus grande en termes de taille, de tonnage, de puissance et de vitesse. C'est pourquoi le nom “Big Boy” résume parfaitement ces qualités. Pour autant que l'on sache, le nom vient d'une note qu'un ouvrier d'ALCO a tracé à la craie dans la chaudière du prototype de la série. Le Big Boy peut atteindre une vitesse de 130 km/h et sa puissance maximale, environ 7 000 CH, est atteinte à 50 km/h.

De todas las locomotoras articuladas, la 4-8-8-4 fue la más grande en términos de tamaño, tonelaje, potencia y velocidad. Es por ello que el nombre “Big Boy” resume a la perfección estas cualidades. Por lo que se sabe, el nombre procede de una nota que un trabajador de ALCO trazó con tiza en la caldera del prototipo de la serie. La Big Boy puede alcanzar una velocidad de 130 km/h y su máxima potencia, unos 7000 CV, se alcanza a los 50 km/h.

Of all the articulated engines, the 4-8-8-4 was the “biggest” in terms of size, weight, power and speed. Hence the name “Big Boy”, which appropriately summarizes all these qualities. It seems that the name comes from a chalk writing on the door of the smoke room of the prototype 4000 by an ALCO worker. The Big Boy can reach a speed of 80 miles per hour and its maximum power, of over 7000 hp, develops at a speed of 30 mph.
